

Marx on Ecology – a Key Work (1878)

By Karl Marx

Table of Contents

- I. Consciousness of nature, naturalism and philosophy of nature
- II. Consciousness of lived experience
- III. Practices of ecological life

- IV. Long term health thinking
- V. Scientific consciousness
- VI. Such ratios to daily culture as it were
- VII. Cultural forms remain and capital is uprooted for in fact culture
- VIII. Culture as a Living Materialism and just that
- IX. How in fact ecology means utopianism

I. Gotha and Ecology – what do I mean explicitly?

If in fact one extends
the Gotha to ecology,
then in fact ecological
consciousness becomes
maximalized, and that
then is a perfect
weather and day for
history, it becomes a
consciousness of the
people who are poorest,

and also means good days for all.

II. Ecological Marxism – why ecology is profoundly true

In fact then ecology is a correct salient perspective on the economy – with ecology one can argue (Engels edit this)

Friedrich Engels –
Edited Work henceforth

- I. Ratios of living labour to dead labour with a living ecological consciousness which becomes a naturalistic lifestyle and life pattern of cycling perhaps, even being into forming camps in the rain and drinking tea and smoking cigarettes.
- II. Ratios such as these mean lived

experience again –
Marx always means
the labour you are
seeing and the
companies you are
seeing, with rain or
winter you are
feeling.

III. Ecological Ratios
to Capital, Labour
and State capital –
such a beautiful life
to bring capitalism
to a Stillstand, I
mean no capitalism
allowed – just a

Grundrisse for
nature.

IV. Grundrisse based on
pure and simple
Spirit, which then is
how philosophically
we achieve even
scientific
consciousness with
it.
